Following the deepest recession since the 1930s, the economic recovery is well under way, though the pace of growth remains relatively subdued.

While national economic growth fell significantly during the recent recession, comparisons to the Great Depression are exaggerated.

Source: U.S. Bureau of Economic Analysis
Economic activity accelerated in the second quarter of the year, as drag from government spending cuts and business investment in structures subsided.
There are some encouraging signs in the overall regional economic picture

• Recent survey data suggest that businesses expect growth to pick up over the next two to three years, citing the following factors as driving activity:
  ➢ Improving export picture
  ➢ Positive signs of an accelerating business investment
  ➢ Increasing clarity with tax and regulatory policies and costs
  ➢ Benefits of productivity enhancements
  ➢ Improving access to credit/capital

• Business contacts reported that the employment picture is improving (though lagging the pace of sales).

• Contacts continued to report increases in sales, particularly in autos.
Business contacts continue to expect near-term growth to be sustained at or slightly above current levels.

What is your outlook for the rate of growth in your business over the next three to six months compared to current rates?

Nonfarm payrolls have been rising on the whole since 2010. However, the pace of growth has lagged behind that of “typical” recoveries.

Source: U.S. Bureau of Labor Statistics
Payroll employment increases in August were driven by increases in the retail sector with 44,000, health care adding 33,000, and professional and business services adding 23,000 payrolls.

*Services include professional and business services, leisure and hospitality, and other services.*
Despite slow progress in the unemployment rate, joblessness remains far too high.

*Note: Marginally attached workers currently want a job and have looked for work within the last 12 months. This primarily includes discouraged workers (those not currently looking for work because they believe no work is available given their circumstance), and persons not now working due to family responsibilities, ill health, or because they are in school.

The government and other services sectors are contracting in the region. Business services, construction, and leisure and hospitality industries are showing the most growth.

**Slipping**

Real personal income growth has been trending a little below 2 percent for the past year and a half. However, disposable incomes took a hit following the payroll tax hike at the beginning of 2013.
Consumer confidence remains well below prerecession levels. However, wariness about the future continues to subside.
Real consumer spending disappointed in July, as spending on durable goods (re: autos) slowed and spending on services continued to slip amid rather broadly based weakness. Still, the trend growth in overall consumer spending remains near 2 percent—just a shade under its recovery average.
The U.S. housing market has been a particular source of strength recently. Home sales are on a gradual up-trend (though still about 16 percent under levels posted a decade ago). Home prices are now up 12 percent on a year-over-year basis.
Most states are seeing growth in home prices. In the Sixth District, the strongest gains are seen in parts of Georgia, Florida, and Tennessee.

Recent data on the industrial sector have been encouraging. Though manufacturing production remains modest, new orders for core capital goods—an indicator that tends to be forward looking—have shown promising strength over the last couple of months.
The trade deficit widened in July as imports increased and exports fell slightly. On a year-over-year basis, growth in both exports and imports has begun to trend higher in the past few months. The trade deficit remains well below its prerecession levels.
According to the International Monetary Fund, global growth is likely to remain subdued this year. Growth forecasts have been lowered compared to projections a few months ago, mainly as a result of a slowdown in key emerging markets.

Looking beyond recent volatility in energy prices, the underlying trend appears to show inflation tracking just below the FOMC’s 2 percent objective.
According to conventional TIPS market estimates, longer-term inflation is likely to remained relatively subdued.

Conclusion: Modest Growth and Stable Inflation
Progress on bringing down unemployment will continue to be slow.

• There will likely be a pickup in real GDP growth over the balance of 2013, with a further step-up in economic activity as we move into 2014.

• Inflation expectations appear to remain well anchored.

• Although the national unemployment rate has dropped to 7.3 percent, broad labor market conditions remain mixed, with some indicators showing progress and others revealing little or no improvement.

• There are some encouraging developments in the economy, but more months of improving economic data, especially employment data, would help give confidence that the economy is experiencing sustainable momentum.
