Did You Know That September Is Emergency Preparedness Month?

Here are some resources to help you prepare.

The Emergency Financial First Aid Kit, also known as the EFFAK, helps you maintain financial stability in the event of an emergency by helping you to identify and organize key financial records and develop a quick reference file for your most important financial documents.

The FEMA disaster preparedness website has useful resources for developing your own emergency plan as well as resources for teaching children about the different type of disaster threats, what to expect, and how to prepare.

“What I Learned from the Colorado Springs Wildfire.” Part 1 of this two-part series looks at steps you can take to protect your financial interests in the event of a disaster.

Official Red Cross Hurricane app—it’s free! Search the iTunes or Google Play apps stores with the keyword "Red Cross" to download the app.

Beyond Personal Finance: Using Katrina’s Classroom Videos across Disciplines

While the lesson plans of Katrina’s Classroom: Financial Lessons from a Hurricane deal with personal finance and emergency preparedness, the videos from the curriculum can be used for so much more. They can serve as conversation starters or to give context to lesson plans for a variety of topics or activities. Some of these topics could include social issues, prioritizing, family dynamics, friendships, weather patterns, urban planning, government relief spending, rebuilding communities, rebuilding costs, population shifts, employment shifts, and on and on. Further, the concepts can provide a backdrop for activities in math, statistics, creative writing, debate, fine art, science, geography, family consumer science, and current events—just to name a few.

The FEMA disasters website provides a wealth of information for similar activities. It has searchable, downloadable data and narrative reports of all federally declared states of emergency. You can pull data for every state on 26 different types of disasters (including weather, terrorism, chemical, viral, fire, flood, industrial) and four disaster declaration types (major, emergency, fire management, fire suppression).

While Hurricane Katrina was a significant event in 2005 that continues to have implications today, disasters of one type or another happen everywhere and all the time. A suggestion for developing a lesson based on similar situations in your state or region follows.

Activity suggestion

FEMA data show that the states of the Sixth Federal Reserve District—Alabama, Florida, Georgia, Louisiana, Mississippi, and Tennessee—have had 55 major disaster declarations since Hurricane Katrina. The chart breaks the numbers of “Major Disaster Declarations” out by state.

Use the data in the chart above (or similar data for your state or region) and have your students do the following tasks.

1. Map, chart, or graph the disaster declarations by type, by state, by year (not shown here but available on the FEMA site).
2. Calculate ratios of incidence of disasters between states or between disaster types.
3. Make a prediction about weather activity in each state for the next year. Describe how you arrived at your prediction.
4. Research and identify the agricultural industries in each state. Discuss or write about the economic impact of the weather disasters of the last seven years (or in any selected year) on these industries.
5. Discuss, research, or write about why certain states appear to be more prone to certain types of weather disasters than others.

This chart activity is just one example of how you can use the videos of Katrina’s Classroom to frame the study of topics in subjects beyond personal finance.
