

## **GDP Infographic Activity: What Is Included in GDP?**

By Lesley Mace, senior economic and financial education specialist, Federal Reserve Bank of Atlanta, Jacksonville Branch

### **Introduction**

In an address given at the University of Kansas in March 1968, the late Robert F. Kennedy famously opined that gross national product “can tell us everything about America, except why we are proud that we are Americans.” (Gross national product, or GNP, was used as the official measure of U.S. production until 1991.) Kennedy’s speech, which extolls the virtues of children’s health, education, and play as well as poetry, strong marriages, courage, and wisdom, is a thought-provoking primary source to begin a discussion of what our current measure of economic production, gross domestic product (GDP), does and does not capture.

### **Procedures**

1. To begin the activity, read or display Visual 1: “Robert F. Kennedy Jr. Quote.”
2. Explain that gross national product was used as the official measure of U.S. production until 1991. Gross national product measures the total value of all final goods and services produced by citizens of a country in a given period of time, regardless of whether those goods are produced within that country’s borders or abroad. Gross domestic product measures the total value of all final goods and services produced within a country’s borders, whether they are produced by citizens of that nation or not.
3. At the time of Robert Kennedy’s speech, GNP was \$800 billion. Ask students if they can estimate what it is today.
4. Inform students of the current GDP level; you may also wish to highlight the current differences between GDP and GNP. The current news release can be found here:  
<http://bea.gov/newsreleases/national/gdp/gdpnewsrelease.htm>; click on full release and tables to get current statistics.
5. Robert Kennedy’s point was that many of the best things in life cannot be measured in monetary terms. While he mentions the beauty of our poetry, poetry is printed in books, which *are* counted in GDP. Wisdom and learning cannot be measured in monetary value, but textbooks and computers can.
6. Display the GDP infographic section “What is Included in and Excluded from GDP” and tell students that not everything that is produced will be counted in GDP.

7. Depending on students' prior knowledge, you may wish to explain the categories in more detail.

Consumption: Household purchases of goods and services (cars, Internet service, food, doctor's visits)

Investment: Business spending on goods and services used to produce goods and services (factories, machines, inventory). *Make sure to point out that new houses are counted in this category, not consumption.*

Government: Purchases of goods and services by state, local, and federal governments (schools, parks, military).

Net exports: Exports minus imports.

Not included: Intermediate goods (such as tires that go on a new car), used goods (clothing, used cars), financial transactions (stocks, bonds), transfer payments (social security, unemployment benefits).

8. To help students understand this concept, print out the slips of paper from Activity 1: "GDP Cards," and pass them out randomly to students. (Pairs are listed in answer key.)
9. Have students get out of their seats and find another student who has a good related to their good (for example, coffee beans and cup of coffee). Allow time for each student to find their matching card. Let students decide if the good, service, or concept listed on their card would be counted in GDP. Have the pairs read their cards and explain their answer, as well as which category any item may belong in if it belongs in GDP. After all the pairs have correctly matched and explained their answers, students may return to their seats.
10. Allow students to brainstorm other related goods and services that are counted (or not counted) in GDP and related to their cards.
11. For additional activities and resources, see the links in this article.

## Conclusion

12. To assess or close the discussion, have students complete Activity 1, "Components of GDP" from the student handout in the "What's in GDP?" lesson from the Federal Reserve Bank of Atlanta.

## Visual 1: Robert Kennedy Quote

*“Yet the gross national product does not allow for the health of our children, the quality of their education or the joy of their play. It does not include the beauty of our poetry or the strength of our marriages, the intelligence of our public debate or the integrity of our public officials. It measures neither our wit nor our courage, neither our wisdom nor our learning, neither our compassion nor our devotion to our country, it measures everything in short, except that which makes life worthwhile. And it can tell us everything about America except why we are proud that we are Americans.”*
