New Account Fraud Reporting

- Tracking Fraud Losses Related to Accounts Opened Less Than 180 days
- Fraud Losses by Account Age
- Consumer vs. Small Business Accounts
- Losses by Account Opening Channel
- Losses by Transaction Access Channel
Loss Avoidance Reporting

Loss avoidance is the prevention of a loss to the bank through use of internally or externally developed fraud filters or processes. Typically, the bank would take some action to secure its position, such as placing or extending holds on deposits, closing accounts deemed high-risk or fraudulent, refusing questionable transactions, returning confirmed or suspected fraudulent items to the depositing bank, and blocking ATM or debit cards.

Types of Fraud Covered

Currently

- Check
- New Account Fraud
  (account not opened or account closed for fraud)

To be added in 2012

- ACH
- Debit Card
- Mobile RDC
- Online Billpay
- Wire
Challenges

• Consistency: The group must be able to come to an agreement concerning the reporting definitions

• Data Availability: It may take a significant amount of resources for an FI to set up a system to capture data according to the definitions

• Confidentiality: Always of concern to FIs
Challenges

• Ability to collect data on total fraud exposure, not just fraud losses

• Ability to collect data on emerging threats (preventive vs. investigative)

• Ability to quantify the cost of fraud prevention

• Completeness of Data: Are fraudsters moving to nonbank, alternative payment channels?
